Telecom Revenue Digital
Audit Platform

The Most Powerful Incentive for Transparency in Telecoms

For most countries, telecoms represent not only a leading industry but also a major tax contributor. The importance of this sector is such that governments have been prompted to create special bodies to oversee and regulate it after its liberalization in many countries. However, while telecoms have rapidly evolved and transformed into an increasingly complex digital ecosystem, most governments and regulators have continued to rely on a self-declaratory regime to oversee them and enforce regulatory and tax compliance.

The first telecom revenue audit solution ever developed for:

- ✓ Governments
- ✓ Regulators
- ✓ Revenue authorities
- ✓ Other state agencies

In this context, nobody has the real picture, not even the telecom operators themselves. Even the industry reports are largely based, not on objective measurements, but on surveys and subjective self-assessments. While the information may be fairly reliable in some cases, it is not actionable for governments and it certainly does not guarantee comprehensive collection of taxes and other levies

Currently verifies more than 500 M telecom-related transactions each day.

Visio-Revenue changes all of that in a meaningful way. This innovative digital solution does not merely survey the operators; it **objectively and independently measures** what the operators actually produce, including all revenue-generating events that may be subject to taxes and other levies.

Visio-Revenue has been implemented in two countries. It currently verifies more than 500 million telecom-related transactions each day.

Its mere implementation represents, in itself, the **most powerful incentive for true transparency** throughout the telecom industry.

Get Full Visibility Over All Telecom Services and Related Revenues

The state-of-the-art **Visio-Revenue** platform provides objective and comprehensive data on the revenue generated by the whole spectrum of telecom services on an on-going basis, accounting for all revenue-generating events and transactions that flow through the systems of the operators.

Five Things Visio-Revenue Can Do for You:

1

Independently measures and verifies all types of telecom-related transactions and traffic

2

Allows for better-targeted, sped-up and improved fiscal auditing and tax adjustment processes

3

Provides detailed and reliable assessment of expected tax revenues

4

Better informs the planning, decision- and policy-making processes related to telecoms

5

Provides a clear and comprehensive view of the telecom market evolution and trends in your country, in near real-time and over any period.

It also provides reliable data that is very useful in informing, accelerating and better targeting fiscal verification processes. Upstream, it helps identify in advance what needs to be audited and, downstream, it supports the auditing process with strong evidence.

Moreover, by providing the real picture of the telecom market in your country, as it is right now and for any given period, **Visio-Revenue** allows for evidence-based decision and policymaking.

What Visio-Revenue verifies and measures:

Voice services

Messaging services

Data services

Bundles

Top-ups

On-net traffic

Off-net traffic

International traffic (in and out)

Roaming

Features & Characteristics

Two methods of data collection: signaling messages capture and daily dumps

100% non-intrusive

Comprehensive reporting applications

Highly scalable

Fast implementation

Automated monitoring functions

Alerts

Highest standards of security

Upgradable and customizable

Compliant with privacy laws

Proven solution implemented in 2 countries

Benefits

Dramatically enhanced transparency throughout the telecom industry.

Improved collection of taxes and other levies.

Sped-up fiscal audit processes.

Better collaboration between the authorities and all stakeholders.

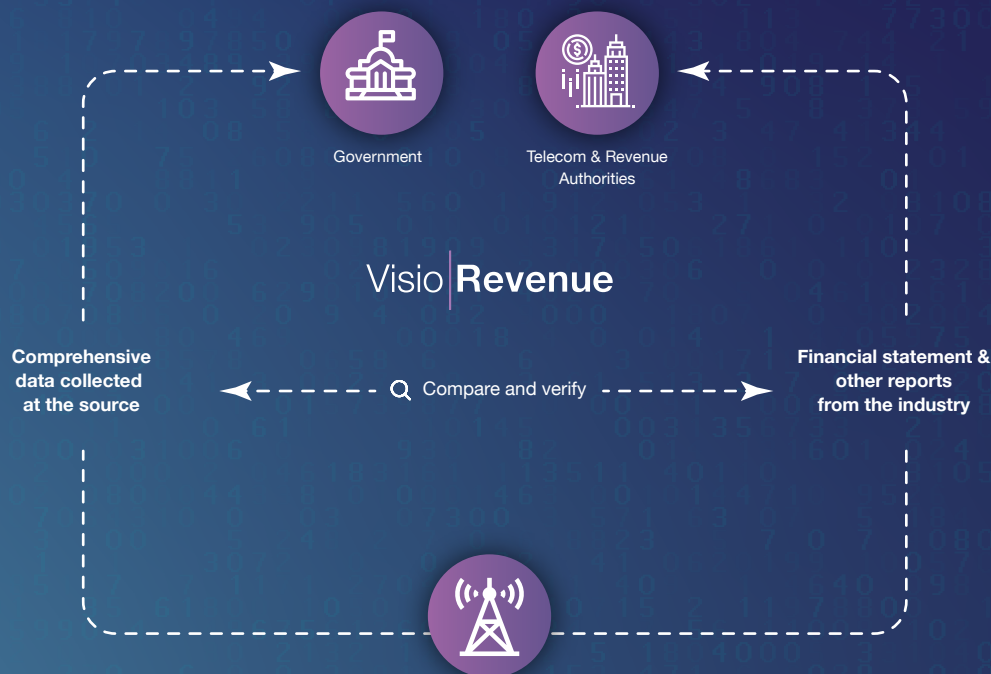

Better protection of consumers.

Enhanced industry oversight to the benefits of all stakeholders.

Better-informed decision- and policy-making related to telecoms.

VISION
