## Telecom Revenue Tracker

### How much do Telecom Companies owe Governments?

Big corporate taxpayers often – if not systematically – play cat-and-mouse with revenue authorities.

This is a time-consuming and frustrating game, especially for the governments and revenue authorities of countries that need to improve their domestic revenue mobilization.

In the telecom sector, many global providers have faced huge penalties for failing to declare their actual revenue.

**SOMETIMES, THE FAILURE TO COMPLY CAN BE ATTRIBUTED, AT LEAST TO SOME EXTENT,** to the complexities of the telecom sector and of the regulatory frameworks.

## THE MOST POWERFUL INCENTIVE TO TRANSPARENCY AND COMPLIANCE

Visio Revenue is a **cutting-edge system** that **tracks and verifies revenue from the telecom sector**. It covers the whole spectrum of telecom services and transactions, along with the associated taxes, and **enables the authorities to independently collect, at the source, the data** they need to:

Monitor the whole sector or an individual provider for tax compliance

Gather evidence to better inform and speed up fiscal auditing and tax adjustment processes

Get the real picture of the telecom market in their country, based on continuously updated stats

The mere implementation of **Visio Revenue** represents, in itself, the most powerful incentive for true transparency and compliance throughout the telecom industry.

### VISIO REVENUE TRACK RECORD

Visio Revenue has been implemented in several countries where it currently

**tracks and verifies**

**billions**

of telecom transactions every day.
